

# Product Sheet

## VSE™-003

Version: 01

Research Grade Material, *not for human use*

Product #: 103110  
Batch#: V97STG01  
Storage: 20 ± 5°C, protect from light  
Stability: Use within 1 year of receipt

### Product Description

VSE™-003 is an enhancer developed to improve Adeno-Associated Virus (AAV) production in suspension HEK293 cell systems. It is formulated to enhance overall AAV yield, with demonstrated increases in function titer across proprietary suspension HEK293 lineages, media and transfection reagents. VSE™-003 is intended for integration into AAV manufacturing processes to increase yield.

Analytical Method	Acceptance Criteria	Result
Visual Appearance	Pale yellow to off-white solid	Pale yellow solid
ID by <sup>1</sup> HNMR	Conform to the reference standard	Conform to the reference standard
Purity by HPLC (% area)	≥ 98.0	100.0
Solubility	Dissolved at 25 mM in DMSO	Pass
Biological Activity by AAV Functional Titer Assay *	≥ 1.5-fold change	Pass

### \* Functional Assay

VSE™-003 is tested for enhanced AAV production in suspension HEK 293-based cells with a polycationic polymer transfection reagent using a reporter-encoded transfer vector. Functional titer is quantified based on virus-mediated reporter activity and the average result is expressed as fold change over control baseline-titer.
